

Windows Security

User Privileges

- Admin: Full control of system
(install software, change settings).
- Standard: Limited control, safer for daily use.
- Users should only have permissions necessary
for their tasks.
- Prevents malware from running with
full system rights.
- Reduces accidental system changes.

User Account Control *(UAC)*

- Windows feature that asks for confirmation when programs try to make system changes.
- Always notify / Notify only apps / Notify never (not recommended).
- Importance
- Stops unauthorized changes and malware execution silently.

Remote Desktop Protocol

(RDP) Security

- Allows remote access to Windows machines.
- Weak passwords → brute-force attacks.
- Open RDP to internet → hackers can exploit.
- Use strong passwords.
- Limit users allowed to RDP.
- Enable Network Level Authentication (NLA).
- Consider VPN for remote access.

Key Windows Security Tips

- Keep Windows up to date (Patch Management).
- Enable Windows Defender or any antivirus.
- Disable unnecessary admin accounts.
- Monitor Event Viewer → Security logs for unusual activity.
