

- *Imagine a company's system gets hacked.*
- *Attackers are already inside the network.*
- *Sensitive data is leaking.*

Who protects the organization at that moment?

 *The answer is Blue Team.*

What is Blue Team?

- Acts as defenders
- Monitors systems and networks
- Detects cyber attacks
- Responds to security incidents
- Simple Concept:
- Red Team = Attack
- Blue Team = Defense

Blue Team **Responsibilities**

- Key responsibilities include:
- Continuous system monitoring
- Attack detection
- Incident response
- Threat analysis
- Log monitoring
- Malware detection
- Network security and protection

Incident Response Basics

- It is the process of identifying, managing, and resolving a cybersecurity incident.
- It begins when a security breach or attack is detected.
- Examples of security incidents:
- A company server gets hacked
- A ransomware attack occurs
- An employee account gets compromised

Incident Response Life Cycle

- Preparation
- Detection
- Containment
- Eradication
- Recovery
- Lessons Learned

Real-World Example

Ransomware Attack Scenario

- If a company faces a ransomware attack, the Blue Team may:
 - Disconnect infected computers from the network
 - Analyze system and network logs
 - Remove the malware
 - Restore systems from backups
- Improve security controls to prevent future attacks
