

What is Threat Intelligence?

- It is the process of collecting, analyzing, and using security data
- Helps identify potential cyber threats and attackers
- Provides actionable insights to improve security decisions
- Used by Blue Teams to detect, prevent, and respond to attacks

Types of Threat Intelligence

- Strategic Intelligence
- Tactical Intelligence
- Operational Intelligence
- Technical Intelligence

Indicators of Compromise (IOCs)

- Evidence that a system may be compromised or under attack
- Common IOCs:
 - Suspicious IP addresses
 - Malicious domains/URLs
 - File hashes (MD5, SHA256)
 - Unusual network traffic
 - Unknown processes or files

Threat Intelligence Data Sources

- Open Source Intelligence (OSINT)
- Internal Data
- Commercial Threat Feeds
- Dark Web Monitoring
- Security Communities

Why Threat Intelligence Matters?

- Helps detect threats early
- Improves decision making
- Strengthens overall security posture
- Supports faster incident response
