

What is OpenVAS?

- OpenVAS = Open Vulnerability Assessment Scanner
- Free & open-source tool for vulnerability scanning
- Scans networks, servers, and applications for security weaknesses
- Provides automated detection of outdated software, misconfigurations, missing patches

What is Greenbone OpenVAS (GVM)?

- GVM = Greenbone Vulnerability Management
(successor of OpenVAS)
- Full vulnerability management framework (not just scanner)
- OpenVAS Scanner → performs the actual scans
- Greenbone Security Assistant (GSA) → web interface (GUI)
- Manager (gvmd) → manages tasks, schedules, users, reports
- Provides enterprise-level features
- OpenVAS is now a part of GVM, not separate
