

***Firewalls don't stop every breach. Why?
Because true security is about Strategy, not
just Tools. Welcome to the world of GRC:
Governance, Risk, and Compliance
The backbone of enterprise security.***

What is GRC?

- GRC = Governance, Risk, Compliance
- Framework to manage security, risk, and regulations
- Aligns security with business goals

Governance

- Security policies and rules
- Roles and responsibilities
- Decision-making framework
- Security strategy and oversight

Risk Management

- Identify risks
- Assess impact and likelihood
- Reduce or mitigate risks
- Continuous risk monitoring

Compliance

- Follow laws and regulations
- Meet industry standards
- Maintain audits and controls
- Avoid penalties and violations

Why GRC Matters?

- Improves security posture
- Reduces business risk
- Supports legal compliance
- Builds trust and resilience

Common GRC Frameworks

- NIST Cybersecurity Framework
- ISO 27001
- PCI DSS
- GDPR

GRC in Real World

- Risk assessments
- Security policies
- Compliance audits
- Incident response planning

Key Message

- Security is not just tools
- Security also needs governance
- Risk must be managed
- Compliance must be maintained
